

Here are your decals, thanks! Cut them apart carefully, peel off the backing sheet and place on your nice, clean surface. If you got tank decals, please note that the eagle faces forward on each side of the tank. Burnish down with a dull, flexible instrument to work out any air bubbles, and get the edges well. Peel off the front sheet at a sharp angle and stand back to admire your work. I suggest that you clear coat over them for durability, otherwise be careful of spilling gas on them.

Good luck!
